DASH – Working Practice Document No. 2

Storage Guidelines for Desmopressin 4mcg/ml/Placebo Injection

Desmopressin should be stored in a refrigerator between 2°C and 8°C.

Temperatures should be recorded DAILY. Temperature deviations must be reported as follows.

Temperature Deviation:

- **< 2°C - DO NOT USE**
Immediately return all affected supplies to local site pharmacy unused. A temperature excursion form should be completed and forwarded to the DASH Trial Team (dash@nottingham.ac.uk), who will advise on the course of action.
- **>8°C to ≤ 25°C - Continue to store in the refrigerator but complete details on the cumulative temperature excursion form.**
Temperature excursions between 9°C and 25°C only need to be reported to the DASH Trial Team, if the cumulative time period out of range is greater than 28 days.(672hours)
- **> 25°C - DO NOT USE**
Immediately return all affected supplies to local site pharmacy unused. A temperature excursion form should be completed and forwarded to the DASH Trial Team (dash@nottingham.ac.uk), who will advise on the course of action.
